SUMMARY

An Electrical Engineering student skilled in embedded system, IoT system, microcontroller programming. Skilled in PIC, LPC2148, STM32, ATMEGA328P, ESP8266 and developing sensor based automated, real-time monitoring, fault detection and control system. Learned C/C++/python programming, Communication protocols (SPI, I2C, CAN, MQTT, UART). Proven ability in Team leadership, prototype development and system troubleshooting.

EDUCATION

LSSBM's Padmashri Dr V B Kolte College of Engineering
Bachelor of Engineering - Electrical Engineering (BE in EE) CGPA: 8.0

Malkapur, Buldhana, 443101
November 2022 – June 2025

LSSBM's Padmashri Dr V B Kolte College of Polytechnic
Diploma in Electrical Engineering, Percentage: 80.33%

Malkapur, Buldhana, 443101
July 2019 – June 2022

SKILLS

- **Programming Language:** C/ C++/ Python
- **Micro-controller:** PIC, LPC2148, STM32, ATMEGA328P
- **Cloud Platforms:** Internet of Things (Arduino Uno, ESP8266/32)
- **Technical Skills:** Real Time Operating System (RTOS)
- **Platforms:** MPLAB X-IDE, Keil Version, STM cube IDE, Arduino IDE, Proteus
- **Communication Protocols:** I2C, SPI, CAN, MODBUS, UART, MQTT
- **Sensors:** Ultrasonic Sensor, Infrared sensor, Temperature and Humidity Sensor

PROJECTS

Control and Protection System in Induction Motor: Developed and implemented control and protection system for induction motor using micro-controller. Designed fault detection logic to automatically shut down the motor in response to abnormal condition. Integrated a user interface for real time monitoring of motor status and control of operation. I have the role of team leader in this project (**Technology used:** Sensors, Arduino uno, Induction motor) (**March '25**).

IoT Based smart solar and Irrigation system: Designed an IoT based smart solar and irrigation system using sensor and a micro controller. Ensured efficient use of water and provide real time monitoring. Developed a prototype of a smart solar irrigation solution that decreases water usage. I have the role of team leader in this project (**Technology Used:** Various sensors, ESP8266) (**April '24**)

Solar Power, HOG used in train and Automatic system on station: Specialized in the integration of solar energy station and automatic on/off system on station. Contributed to the installation and maintenance of the rooftop solar pv system in the train coaches. Involved in designing Automatic control of Fan/Light for railway station operation. I have the role of team leader and prototype developer in this project (**Technology Used:** Various Sensors, Solar PV Module) (**March '22**)
